COMMITMENT
YOU CAN COUNT ON

- 5i. A description of the efforts undertaken during the year to reduce the volume and toxicity of waste generated.

The volume of K061 produced is dependent on the volume of steel produced. Annual melt shop steel production and K061 generation in 2013 was less than the 2012 production year.

| Calendar Year | K061 Generated |
|---------------|----------------|
| 2011 | 10,121 tons |
| 2012 | 10,107 tons |
| 2013 | 8,114 tons |

CMC exports/ships this material to Zinc Nacional or other zinc reclamation facilities for the sole purpose of reclamation of the zinc metals contained therein. Its contract with Zinc Nacional requires a minimum of 15% zinc. Zinc Nacional recovers the metal for use in pigments, medicines, and other commercial and industrial uses. The residues from the processing are non-hazardous. Therefore, after reclamation by Zinc Nacional, the hazardous waste volume is reduced to zero and the toxicity of all solid waste by products is zero.

- 5ii. A description of changes in volume and toxicity of waste actually achieved during the year in comparison to previous years to the extent such information is available for years prior to 1984.

There was a decrease in the volume of EAF Dust generated in comparison to calendar years 2011 and 2012. There was no change in toxicity of waste generated by CMC during 2013.
